

RESTORATION OF EXISTING STRUCTURES

SOLAR INNOVATIONS®
ARCHITECTURAL GLAZING SYSTEMS

As one of the largest custom manufacturers of residential and commercial sloped glazing products, Solar Innovations has the technology and innovative design capability to help restore most existing structures by other manufacturers such as Sunplace, Everlite and more. Our experienced staff will help you evaluate the most effective way to repair or even replace any existing structure. We can also supply custom parts for those who prefer to repair a structure themselves.

Some of our stock replacement parts include:

- Flat glass for most applications
- Curves to fit Everlite structures*
- Curves to fit Sunplace structures*
- Curves to fit Four Seasons structures*
- Curves to fit Skytech structures*
- Glazing bar caps & screw covers (exterior screw-in caps)
- Most cover caps for the exterior
- Most gaskets & tapes which are damaged while replacing glass
- Solar Innovations' windows, doors, ridge vents, and operable skylights can be adapted to repair or improve almost any existing structure.

If we don't have what you need in stock and, for whatever reason, we are unable to fabricate it, we will try to refer you to someone who can do it. Our goal is your satisfaction.

Solar Innovations® offers a framing unit known as the "restoration" system. This framing system features a profile that mimics historic greenhouse designs. The framing system is manufactured from maintenance-free, durable aluminum and provides an antique aesthetic. This system is perfect for greenhouse restoration but it can also be used to construct a new structure with historic appeal.

*Call for available curve sizes and glazing types in stock.
